

Identifying the Markets and Opportunities for MEMs and Sensors
Jim Feldhan, President, Semico Research

Mems and sensors are a key component to most new electronic systems. Most emerging applications require an increasing data streams from MEMs and sensors. The use of MEMs and Sensors are critical to solving serious challenges in terms of improving performance, monitoring and making decisions. This presentation will identify and quantify the markets for MEMs and Sensors and provide a market forecast.

The driving markets for MEMs and Sensors are automotive, communications and IoT to name a few that will be covered
